Create Workflow Using Zoho Creator

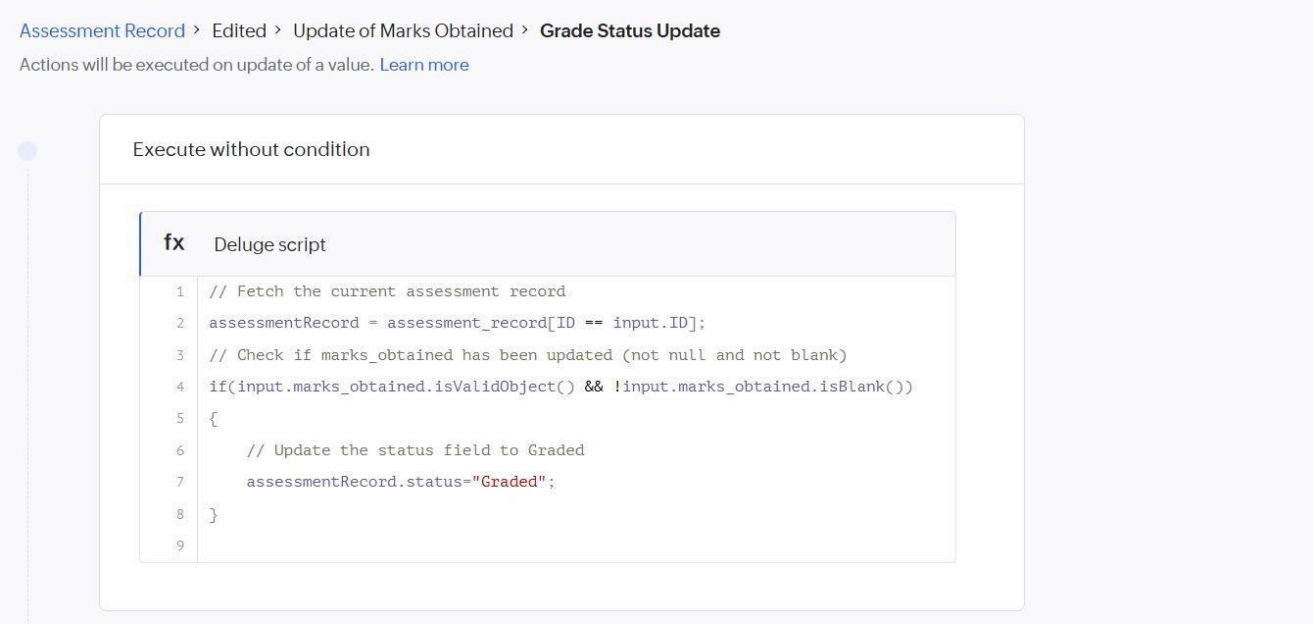

Aim

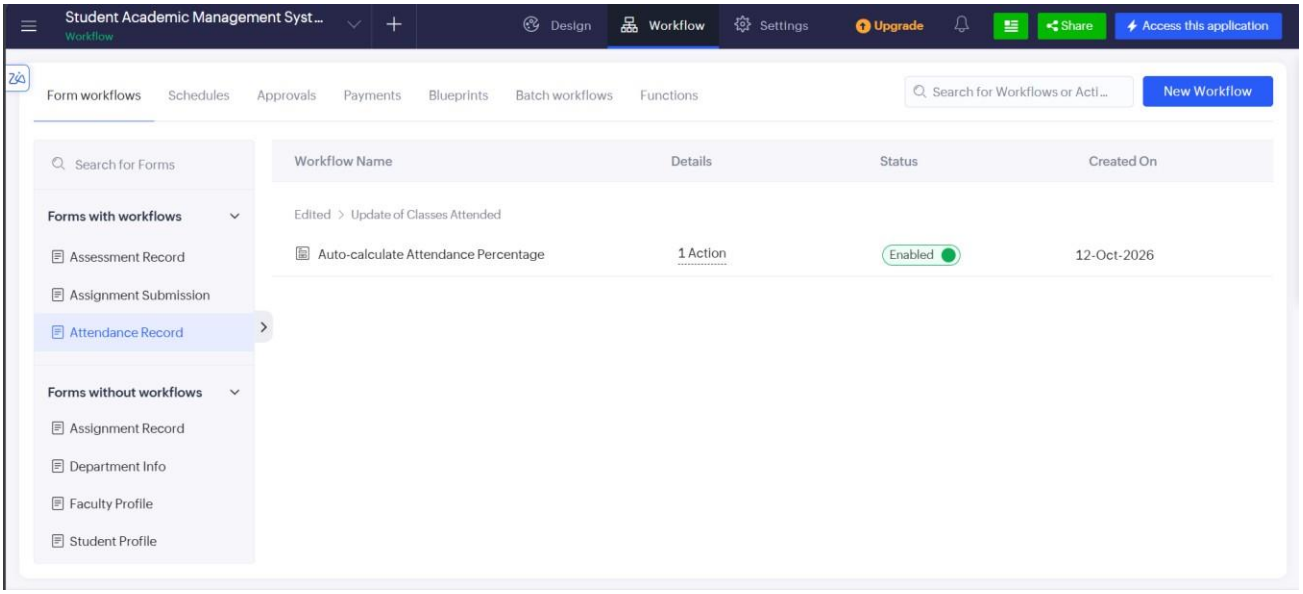

To create a workflow in the Student Academic Management System that automatically performs an action when a student record is added or updated.

Procedure

1. Log in to Zoho Creator and open the Student Academic Management System application.
2. Navigate to the Workflow section in the application builder.
3. Click Create Workflow and select On a form event.
4. Select the form for which the workflow needs to be created, such as Marks Entry.
5. Choose the trigger, such as On Create or On Create or Edit.
6. Give the workflow a suitable name, such as Low_Marks_Alert.
7. Configure a condition to check whether the student's marks are below 40%.
8. Select an action, such as displaying an alert or sending a notification to the faculty.
9. Save the workflow and enable it.
10. Test the workflow by entering sample marks below and above 40% to verify that the action works correctly.

Output

Assessment Record › Edited › Update of Marks Obtained › Grade Status Update
Actions will be executed on update of a value. Learn more
Execute without condition
fx Deluge script
// Fetch the current assessment record
assessmentRecord = assessment_record[ID == input.ID];
// Check if marks_obtained has been updated (not null and not blank)
if(input.marks_obtained.isValidObject() && !input.marks_obtained.isBlank())
{
// Update the status field to Graded
assessmentRecord.status="Graded";
}

Result

The workflow was created successfully in the Student Academic Management System. It automatically checks the entered marks and performs the configured action when the specified condition is satisfied, reducing manual work and helping faculty monitor student performance.
